Model: Cooler 70

Internal dimensions able to handle a standard USA Pallet 40 x 48 inches

TECHNICAL FEATURES

Built using the latest rotomolding technology as a single piece body structure, made of food contact safe material. The absence of joints makes washing easier.

The door slides up to 270 ° and has a blocking device.

The walls are reinforced with a metal structure inside them, and they are filled with polyurethane foam

Trays can be held in slots which do not overcome the wall, allowing the full use of the inner space of the containers.

Stainless steel lock and hinges

The inner walls have grooves which allow air flow even with a full container

The pallet base can be either stainless or galvanized steel.

The handles are built in to avoid any risk of squeezing hands against any external object during the manipulation of the containers.

The silicon gasket can be removed and replaced.

All metal parts are strong and easy to maintain, they are screwed to metal plates placed between the walls of each container.
